

ERRATA

All known errata are corrected in the online preview text. The errata listed below do not include purely typographical infelicities and errors (e.g., on p. 97 in *Arda Philology 2* the last line should be indented).

Text below that is in italics and enclosed in curly brackets *{like this}* is added to describe or explain an erratum or replacement.

The author of the final article has noted an error in its contents, and an obscurity in its text.

Error: As stated in footnote 1 on p. 103, Etym.AC NARTA- was not excluded from the statistics. In accordance with the procedure described on pp. 103–4 it should have been registered as N-A-RT-, and excluded because of its intractable inlaut group. Instead, it was erroneously (under impression of its potential belonging with NAR¹-) registered as N-A-R-. Thus, the statistics ought to have comprised 604 roots from “The Etymologies”, rather than 605. The results presented in Table 5 are however not affected by the error.

Obscurity: The next to last paragraph on p. 104 mentions LT as an intractable inlaut group, and then lists roots that are intractable because of inlaut groups. The root that has LT, Etym. LILT-, should of course also have been explicitly named there.
